

Virtual Reality for Real-World Care

VRCARE aims to transform social and healthcare education by **integrating Virtual Reality as a teaching methodology**, providing immersive, real-life learning experiences for professionals working with children and the elderly. By bridging the gap between education and the labour market, the project enhances ethical decision-making, interpersonal interactions, and sensory training. Additionally, it equips educators and caregivers with cutting-edge digital tools to improve the quality of care and learning.

An innovative approach that will go beyond education by providing real-life-like learning experiences through VR scenarios, a Virtual Learning Environment, and a comprehensive VRCARE Library.
